

Cut costs and save time with a cloud fax solution designed for healthcare

In any business, but especially in healthcare, time is money. At Vyne Medical, we know fax management consumes valuable time for many hospitals and health systems. The proliferation of paper is real and it costs hundreds of thousands – even millions – of dollars annually for healthcare organizations across the US.

As healthcare providers seek to modernize their technology stacks in the ongoing quest to eliminate paper, one way to accomplish dramatic productivity improvements is to upgrade from traditional fax machines or servers to enterprise-wide cloud fax solutions.

With so many options available, choosing the right one can be daunting. Not all cloud fax solutions are alike, and most are not designed with healthcare workflows in mind.

Workflow improvement

The Refyne Cloud Fax™ solution was built for healthcare and features tools that make even the most complex workflows easy to manage. Customizable workflows along with advanced reporting capabilities enable Refyne Cloud Fax users to simplify fax management.

If you're like most healthcare organizations, your teams are worklist-driven and so is Refyne Cloud Fax. We understand that the needs of every team are different – that the worklists of scheduling teams have different requirements than those of pre-registration, admissions and authorizations. Refyne Cloud Fax adapts to your teams' processes rather than changing them.

Accessible from any location, teams have the flexibility to manage worklists onsite or remotely and easily share work between team members. Features like alerts, assignments and reminders help drive activities and give teams the

ability to work ahead of scheduled events. Productivity dashboards and quality scoring give leaders insight into volume, workload and team performance.

Seamless integration

Refyne's consolidated platform provides a single, unified workflow for fax management. Cloud-based processing enhances the security of fax data, reduces costs associated with printing and mailing, and frees staff from the limitations of on-premises fax hosting. Communication is exchanged through an encrypted exchange network with reliable tracking for better auditing, fewer backlogs and reduced delays.

Refyne Cloud Fax was designed with the unique workflows of healthcare professionals in mind.

With Refyne's completely digital solution, "busy signals" will seem like a thing of the past. Refyne Cloud Fax connects to existing fax machines and servers to help eliminate phone lines and physical servers and their associated downtimes, monitoring and maintenance.

Refyne Cloud Fax seamlessly integrates with your electronic health record (EHR) and document management systems to centralize fax data and synchronize your EHR and incoming faxes. Auto-indexing technology automates data entry by converting fax content to structured data and integrating it directly to the patient record for efficient search and exchange. Fax data can be easily located using patient name, account number or any other custom indexing field.

Time is money

With fewer resources being called-on to do more work, there's never been a better time to upgrade your fax technology and support your teams with solutions that help rather than hinder their progress. If you're ready to ditch the fax servers and take a step towards automating your fax processes, you should take a closer look at the benefits of implementing Refyne Cloud Fax.

- Eliminate fax servers and machines, phone lines and associated expensive supplies
- Digitize the capture of patient information
- Automate workflows for enhanced productivity
- Integrate with existing technology solutions

It's time to ditch the traditional fax machine and upgrade to a newer, more intuitive fax solution. Find out how easy it is to make the move to cloud-based fax technology. Contact Vyne Medical today.

Choose a cloud fax solution that was designed for healthcare professionals, by healthcare professionals. For more information, contact a Vyne Medical sales representative today.
