

THE REFYNE PLATFORM

Designed by healthcare for healthcare,
a seamless SaaS-based application

Refyne® is Vyne Medical's cloud-based workflow automation software platform which offers a variety of innovative solutions for hospital administrators and clinical providers.

REFYNE AUTOMATE

Capture • Index • Integrate

The Refyne Automate solution works in conjunction with Refyne Cloud Fax to create a built-in customizable workflow engine that integrates with your current EMR to help eliminate the manual steps that slow down hospital staff by placing document capture, auto-indexing, and patient records in an encrypted, enterprise-grade platform. With the capability to automate incoming cloud faxes, Refyne Automate's workflow automatically notifies your EMR service that documents are ready for export, promoting the reduction of paper consumption and the risk of human error.

Centralized Document
Management

REFYNE DENIALS MANAGEMENT

Audits • Attachments • Prior Authorizations

The Refyne Denials Management™ product helps reduce the burden associated with managing the Medicare Audit Process by electronically submitting documents in a timely, trackable manner. A Center for Medicare & Medicaid Services (CMS) approved auditor will confirm delivery and pickup, streamlining your audit and authorization workflows. Gain better visibility over your processes by submitting Prior Authorization requests to CMS electronically to reduce prior authorization delays and increase the response of Additional Documentation Requests (ADRs) by registering a National Provider Identifier to receive electronic communications in the app.

REFYNE CONNECTED CARE™

Care Coordination • Outpatient Services • Telemedicine

The Refyne Connected Care™ product enables providers to build sustainable and collaborative patient care programs with shared care plans and telehealth solutions that provide convenient, online access for patient care delivery. This unified solution creates visibility for both physicians and providers by not only helping you manage care but also enabling your patients to have access to the providers they need, when they need them, from virtually anywhere.

Features within Refyne

REFYNE® CLOUD FAX

Fully cloud based and without fax infrastructure or hardware maintenance, Refyne Cloud Fax works with your existing systems that use the Vyne Medical® Trace solution or the Refyne Automate solution to streamline and customize workflows while reducing paper. Refyne Cloud Fax users simplify their fax management through automation, customizable workflows, and advanced reporting capabilities that make it easy for teams to handle incoming/outgoing faxes and worklists.

TRACE TRANSPORT

Trace Transport allows users of Refyne Denials Management to leverage the wealth of information stored in Vyne Medical's Trace® platform by populating the data into the Refyne system for more robust, streamlined operations. This integration enables Refyne users to search for patients by name and locate documents stored on the Trace server, allowing this data to then be imported and attached to a submission for CMS or commercial payers.

VYNE MEDICAL

Solutions for Hospitals and Health Care Systems Like Yours

Vyne Medical serves a growing base of more than 800 active hospital and health system clients nationwide.

Vyne Medical is a recognized industry leader in end-to-end health information exchange and electronic healthcare communication management.

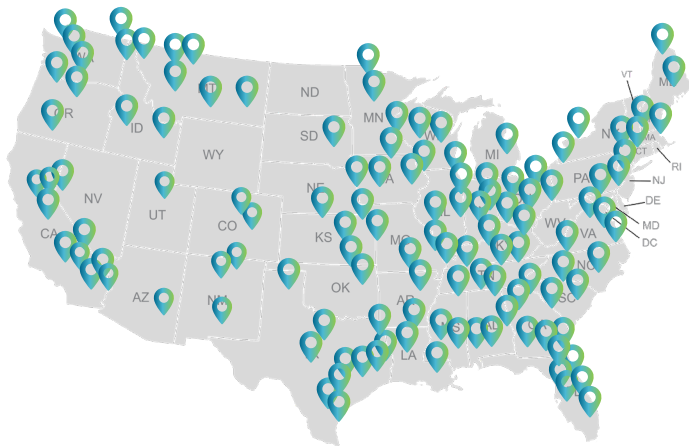

Vyne Medical's healthcare software solutions include the Trace® solution and the Refyne® platform. Both solutions are centralized, healthcare-specific platforms to capture, automate, manage, and exchange interactions with patients, payers and providers—empowering healthcare leaders to improve financial performance and enhance the experiences of patients and staff.

The company's robust technology platforms facilitate the electronic capture, storage and submission of healthcare data in virtually any form - voice, fax, image, data or electronic document.

Well-published results include improvements in financial performance, physician/staff alignment, patient experience, compliance and patient safety/quality.
