

EMAIL TO FAX

A One-step Process to Deliver Emailed Documents via Fax

Hospitals and physician offices are increasingly shifting towards email as a preferred mode of communication while still relying on Trace's workflow automation for efficient handling of their documents. With Vyne Medical's Email to Fax, your existing email is used to seamlessly send and receive faxes to fax destination(s) and Trace in just one step.

WHAT IS EMAIL TO FAX?

Using your existing Trace® user account, effortlessly forward email contents and attachments to fax destinations and/or Trace, directly from your email client within an encrypted environment. Additionally, faxes sent to you via Trace are delivered as an email attachment to your inbox.

HOW EMAIL TO FAX WORKS:

- **Monitors** for emails sent to a 'faxnumber@traceserver.customername.com' email address
- **Identifies** the email sender and cross-references that to a Trace user
- **Submits** the email and attachments along with the fax number and Trace user to the Trace Import Service
- **Trace** handles faxing out the email and any attachments
- **Conveniently** stores emails as a Trace transaction
- **Works** with Office 365 and Microsoft Graph API
- **Trace** delivers inbound faxes as attachments to your native email client

THE BENEFITS OF EMAIL TO FAX

Bi-Directional

Send & receive faxes from your email inbox

Automated Workflows

Automatic conversion & delivery

Encrypted Exchange

Communication with Trace is via SSL

Paperless Process

No printing, faxing, or scanning required
